User Documentation

Prototype Multiple Choice Component

Once the application is started, going to the application's URL will load a multiple-choice component with answer text. The user will be presented with a question and four different options for them to select. The screen should look like the screenshot below.

The user can select an answer and hit the "**Submit**" button to submit their answer to the server. The application will then display a message showing the index of the option that the user selected. It should appear like the screenshot below.

Prototype "Hello World" LTI Application

Once the application is started, going to an assignment configured with the LTI application in Canvas will load a page generated by the application. This page should say "**Hello World**" if the authentication through Canvas was successful. The page should look like the screenshot below.

Noah's LTI Test App

✎ Edit Assignment Settings

Hello World!
